

WE ARE SENDING A MESSAGE

WE ARE SENDING A MESSAGE

And not just to the host with a divert confirmation. But to the industry with a newly developed warehouse control system centered on user experience. Our WXS already comes with free lifetime remote support, zero licensing fees, and a host of other user-friendly benefits.

As Pendant Automation founder Rob Ward agonized over a name for his newly developed warehouse control system, the answer stared at him as he walked out of the PA office building one day and looked to the left. A drive down Revolution Street towards the Chesapeake Bay in Havre de Grace, Maryland will eventually guide you to Young Street, where Pendant Automation is headquartered.

Amongst the ever-growing software offerings available to supply chain professionals today, it is time for a revolutionary user-friendly warehouse software experience. Enter, WXS or Warehouse Xperience System. To understand the WXS better, let's first define WCS and WES.

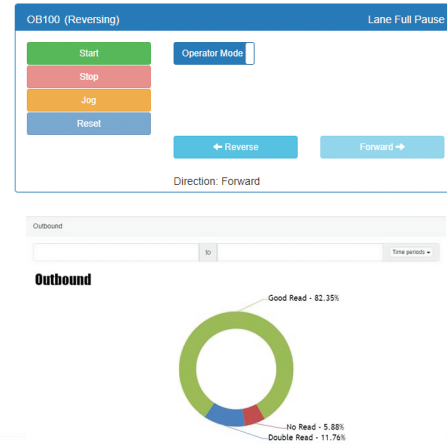

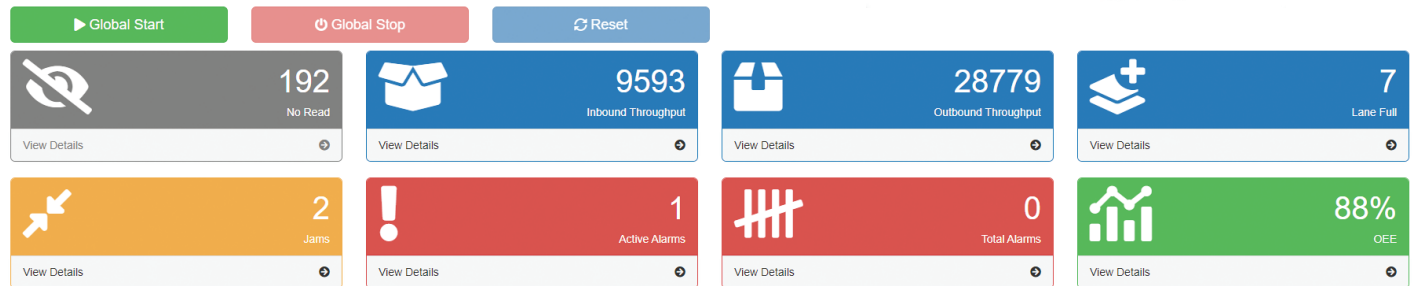

- WCS (Warehouse Control System): Directs the real-time activities of automated material handling equipment.
- WES (Warehouse Execution System): Syncs work resources (automated or human) to daily workload to ensure orders are shipped efficiently.
- Revolution Street WXS (Warehouse Xperience System): Provides user-friendly interface to control, execute, and analyze any process in the warehouse.

Our primary focus is the user. With many different users experiencing warehouse software systems, from engineer to operator to programmer, it's important to tailor to each of their functional needs. We accomplish this by empowering the user and allowing for complete customization.

CURRENT CAPABILITIES

- Zone Routing
